

Technical Data Sheet

PRODUCT: Microcare Fe

9th April 2013

General Information:

Microcare Fe is a rich source of assimilable iron (Fe), an element with prominent role in the process of photosynthesis and subsequently in total production and qualitative characteristics. Its specific method of production and the stable chelate agent (EDTA) ensures the protection of iron cations from possible oxidation and inactivation. Microcare Fe is applicable both through the irrigation systems and by foliar applications.

Indications

It is recommended for crops, where chlorosis occurs to young leaves. Microcare Fe, is compatible with most fertilizers and agrochemicals.

Dosage - Application:

General dosage

Foliar: For foliar application do not exceed a concentration of 0,1% (100g/100L of water). In every case applications should be applied during the cooler hours of day.

Fertigation: 0.5–1.5 kg / 1000m², depending on crops necessities.

Precautions:

General precautions,

Keep away from children, do not eat, avoid contact with eyes and wash hands after use.

Packaging:

Product is available in :

1 Kg cardboard boxes, 20 Kg buckets
