

MANVERT KINOFOL

TECHNICAL DATA

DESCRIPTION:

MANVERT KINOFOL is a natural bio stimulant containing folic acid and cytokinins, which activate the natural metabolic processes of the plant, increasing the enzymatic activity, the photosynthesis and the chlorophyll production.

COMPOSITION:

Folic acid
Cytokinins

%w/v
0,47
0,005

This product is chlorine free.

APPLICATION:

The application of **MANVERT KINOFOL** provides the following advantages:

- The stimulation of the physiological functions of the crop in the periods of sprouting, flowering, pollination and setting. Also improves the growth and development of flowers, fruits, roots and tubers.
- It helps to surmount growth crisis promoted by adverse factors such as drought, frost, phytotoxicities and nutrient blocking.

MANVERT KINOFOL can be applied by foliar spray and through the soil, through different irrigation systems (dripping, sprinkler, central pivot, micro jet...).

MANVERT KINOFOL can be applied all year long, but it is specially recommended between the sprouting and the fruit development just before harvest.

INSTRUCTIONS AND DOSAGE:

- Foliar application: 100-150 cc/hl
- Soil application: 1-2 l/ha

In order to improve rooting, it is recommended to sink the young plants before transplant in a solution of 5 cc of **MANVERT KINOFOL** / 1 L of water during 10-15.

COMPATIBILITY:

MANVERT KINOFOL can be applied alone or mixed with any of the products which are normally used in each crop.

The steps to prepare the mixture should be the following:

1st water – 2nd **MANVERT KINOFOL** – 3rd pesticides

MANVERT KINOFOL is not compatible with high concentration copper products (except on olive trees), products with sulphur or with oil.
